Exam : **GCCC**

Title : **GIAC Critical Controls
Certification (GCCC)**

Vendor : **GIAC**

Version : **DEMO**

NO.1 Which of the following best describes the CIS Controls?

- A.** Technical controls designed to provide protection from the most damaging attacks based on current threat data
- B.** Technical, administrative, and policy controls based on current regulations and security best practices
- C.** Technical controls designed to augment the NIST 800 series
- D.** Technical, administrative, and policy controls based on research provided by the SANS Institute

Answer: A

NO.2 An organization has failed a test for compliance with a policy of continual detection and removal of malicious software on its network. Which of the following errors is the root cause?

- A.** The intrusion prevention system failed to update to the newest signature list
- B.** A host ran malicious software that exploited a vulnerability for which there was no patch
- C.** A newly discovered vulnerability was not detected by the intrusion detection system
- D.** The security console alerted when a host anti-virus ran whitelisted software

Answer: A

NO.3 Executive management approved the storage of sensitive data on smartphones and tablets as long as they were encrypted. Later a vulnerability was announced at an information security conference that allowed attackers to bypass the device's authentication process, making the data accessible. The smartphone manufacturer said it would take six months for the vulnerability to be fixed and distributed through the cellular carriers. Four months after the vulnerability was announced, an employee lost his tablet and the sensitive information became public.

What was the failure that led to the information being lost?

- A.** Vulnerability scans were not done to identify the devices that were at risk
- B.** Management had not insured against the possibility of the information being lost
- C.** The employees failed to maintain their devices at the most current software version
- D.** There was no risk acceptance review after the risk changed

Answer: D

NO.4 Which of the following archiving methods would maximize log integrity?

- A.** CD-RW
- B.** USB flash drive
- C.** Magnetic Tape
- D.** DVD-R

Answer: D
