Exam : **TB0-116**

Title : TIBCO Enterprise Message
Service 6 Exam

Vendor : Tibco

Version : DEMO

NO.1 Which four files are used to guide the exchange of messages between TIBCO EMS and TIBCO SmartSockets? (Choose four.)

- A. export.conf
- B. topics.conf
- C. tall_ss.cat
- D. queues.conf
- E. tibemsd.conf
- F. transports.conf

Answer: B,D,E,F

NO.2 Given the following configuration in the acl.conf file: QUEUE=q1.* GROUP=g1 PERM=send QUEUE=*.sample1 GROUP=g2 PERM=receive Which two statements are true if user u1 is a member of group g1 and user u2 is a member of groups g1 and g2? (Choose two.)

- A. User u1 can send on queue q1.sample1; user u2 can send on q2.sample1 and receive on q1.sample1.
- B. User u1 can send on queue q2.sample2; user u2 can send on q1.sample1 and receive on q1.sample1.
- C. User u1 can send on queue q1.sample2; user u2 can send on q1.sample2 and receive on q2.sample1.
- D. User u1 can send on queue q1.sample1; user u2 can send on q2.sample1 and receive on q1.sample2.

Answer: A,C

NO.3 The queue connection factory QCF has been configured for connections to host H port 7222. Which function will succeed, assuming that the context ctx has been established?

- A. ctx.lookup("tcp://h:7222")
- B. new QueueConnectionFactory("QCF")
- C. (ConnectionFactory)ctx.lookup("QCF")
- D. (QueueConnectionFactory)ctx.lookup("QCF")

Answer: D

NO.4 Given the following bridge: [queue:Q1] queue=Q2 Which statement is true about a failed transaction where a message producer sends a message across this bridge?

- A. Messages are delivered to Q2 but not Q1.
- B. Messages are delivered to Q1 but not Q2.
- C. Messages are delivered to both Q1 and Q2.
- D. Messages are not delivered to either Q1 or Q2.

Answer: D

NO.5 Which three message delivery modes are valid for TIBCO EMS? (Choose three.)

- A. PERSISTANT
- B. NON_PERSISTENT
- C. RELIABLE_DELIVERY

D. CERTIFIED_DELIVERY

Answer: A,B,D

NO.6 Which three statements are correct about TIBCO EMS message bridging? (Choose three.)

- A. Bridges are non-transitive.
- B. The use of wildcards is not allowed when specifying bridge destinations.
- C. Bridges are created between destinations of the same or different types.
- D. Within a transaction, all messages sent over the bridge are part of the transaction.

Answer: A,C,D

NO.7 Which three objects can be deleted using the the delete all command with the TIBCO EMS Administration Tool? (Choose three.)

- A. users
- B. routes
- C. groups
- D. bridges
- E. factories
- F. durables

Answer: A,C,F

NO.8 Which two statements are true about message selectors in TIBCO EMS? (Choose two.)

- A. Both a message producer and a message consumer can specify a message selector.
- B. In active-active route configuration, a message selector can be specified only at the server that creates the route.
- C. A message selector is an optional property that a bridge configuration can specify to limit the messages received by bridged destinations.
- D. A queue message that does not match a queue consumer's message selector remains on the queue until it is received by another consumer.

Answer: C,D

NO.9 Which three statements are true about using Third-Party JNDI Naming/Directory Services with TIBCO EMS? (Choose three.)

- A. Destinations cannot be retrieved from third-party naming or directory services.
- B. To use a third-party directory service, you must have a JNDI provider for that specific type of service.
- C. For third-party services, the only prerequisite is that the objects must have previously been stored there.
- D. EMS supports the storage and retrieval of ConnectionFactories in third-party naming or directory services.
- E. The objects physically stored by EMS coming from a third-party naming/directory service are serialized objects.
- F. The synchronization of administered objects between the EMS Server and the foreign naming/directory services is automatic.

Answer: B,C,D

NO.10 Which statement describes the Publish and Subscribe JMS Message Model?

- A. Each message consumer receives a message from the queue and acknowledges receipt of the message.
- B. Many publishers can publish to the same topic, and a message from a single publisher can be received by many subscribers.
- C. One message producer sends a message to multiple subscribed consumers, and the server broadcasts the message over PGM.
- D. More than one producer can send messages to the same queue, and more than one consumer can retrieve messages from the same queue.

Answer: C

NO.11 A TIBCO EMS Server has the following configuration in the stores.conf and topics.conf files:
stores.conf [mystore] type=file file=mystore.db mode=sync topics.conf > topic1 Which store is assigned to topic1?

- A. mystore
- B. \$sys.meta
- C. \$sys.admin
- D. \$sys.fail-safe
- E. \$sys.nonfail-safe

Answer: E

NO.12 Which two statements are true about a fault-tolerant configuration of TIBCO EMS where the primary server heartbeat has stopped? (Choose two.)

- A. The backup server waits for its activation interval.
- B. The backup server tries to retrieve the information from shared storage.
- C. The backup server assumes control if the ft_weight parameter is equal to 1.
- D. If ft_activation = ft_heartbeat x 5, the backup server becomes the primary server.
- E. The server_timeout_server_connection parameter is used by the backup server before attempting a switchover.

Answer: A,B
